

DUCTLESS HEAT PUMPS MAXIMIZE SAVINGS AND EFFICIENCY

Ductless heat pumps help you save money on energy bills, let you control your heating and cooling in one convenient system and offer increased comfort year-round. Properly using a ductless heat pump as your primary heat source can save you hundreds of dollars a year.

GET THE MOST OUT OF YOUR DUCTLESS HEAT PUMP

If you're thinking about getting a ductless heat pump, or if you already own one, these simple guidelines will help you get the most out of it:

Embrace your ductless heat pump. Instead of using wall heaters or baseboards in the winter, and portable AC in the summer, let your ductless heat pump do its job heating or cooling your main living space.

Set the fan speed option to AUTO. The AUTO setting automatically adjusts the fan speed in order to maximize efficiency. Choose AUTO over any other fixed-speed setting, including QUIET, LOW, MEDIUM or HIGH.

Choose the HEAT or COOL control setting. Unlike the fan speed, the AUTO control setting does not provide the most efficient or comfortable performance, especially in our mild Northwest climate. (Please note: the control setting is different from the fan speed.)

Perform routine maintenance. Clean your air filters as recommended in the owner's manual. Remember to regularly clear any debris that has accumulated around your outdoor unit, too.

GET THE MOST FROM YOUR SYSTEM

Follow our tips to get the best performance from your system. To find a list of professionals to install or maintain your system, call us at **1.866.368.7878** or visit **www.energytrust.org/ductless**.
